

HEWES
BONEFISHER

Hewes Bonefisher 18'

The new Hewes Bonefisher 18' is the latest in a 50 year tradition of quality skiff construction and technology. The original Bonefisher 18' was the boat that started it all. Clean and simply designed, the original Bonefisher still sets the standards for inshore skiffs the world over.

The new Bonefisher keeps those simple qualities of stability, fishing function and smooth handling but delivers a lot more. Through a major redesign of the interior, the new Bonefisher gives the angler more bone dry storage, a fully molded interior, improved under gunwale rod storage, snag free top side hardware plus a lot more. Kevlar® and PVC foam core (no wood) construction have reduced weight and added strength. Thanks to Hewes' new "step-transom" and foam core construction, the Bonefisher 18' delivers a new standard in shallow water performance.

A perfect boat for the inshore angler the new Bonefisher 18' is a classic boat designed for performance, value and all around inshore fishing versatility.
